

ENERGY AROUND US

Start your energy Journey

Hi there! I'm Sun, your home star. I give
light, Heat and Energy to earth. Lets
explore all the amazing things i do.

ENERGY

Energy is the ability to make things happen or
cause change. For example Moving, Heating,
Lighting and making sounds.

Forms of Energy

LIGHT ENERGY

is the energy that allows us to see, and it comes from natural sources. ✨

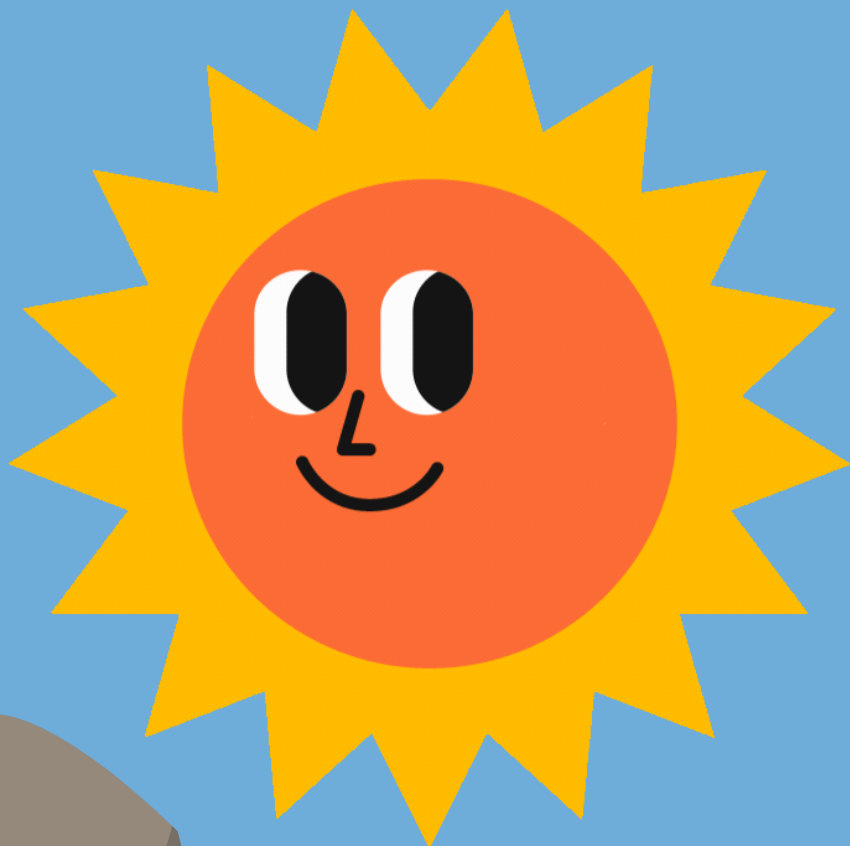

Examples:

The Sun

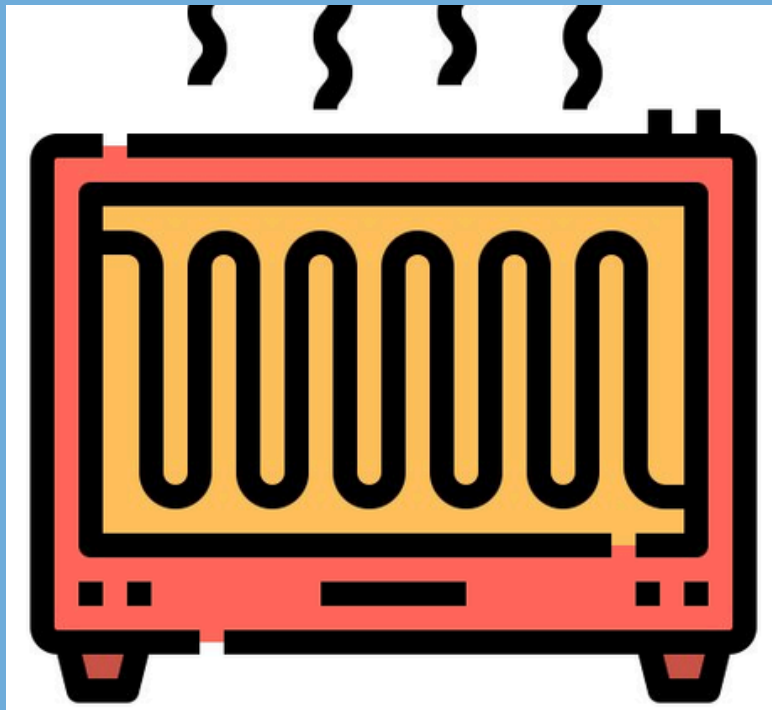

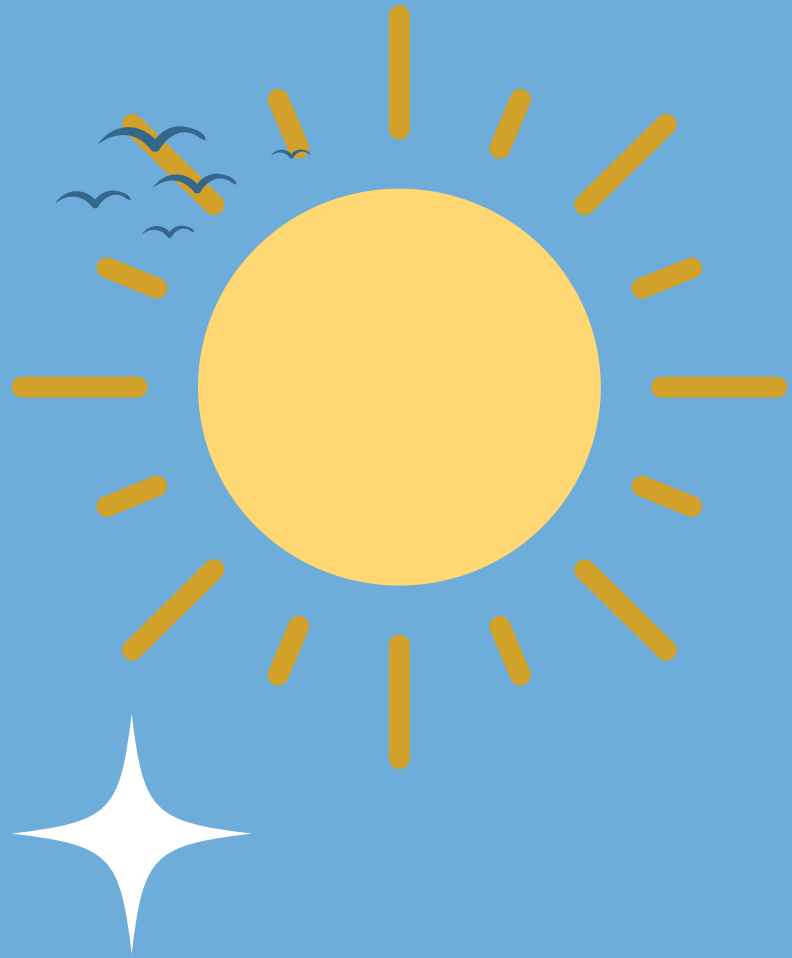

The light

A torch

A candle

Heat Energy

Heat Energy is the energy that makes things warm or hot. For example: The Sun, Fire, Stove and Heater.

Sound & Electrical energy

- Sound Energy is produced when something vibrates. It travels through materials such as air and allows us to hear. 🛎️ A ringing bell
- 🎸 A guitar
- 🗣️ A person's voice
- 📻 A radio

Electric Energy is energy produced by the movement of electric charges. It can be used to power many devices. 💡 Light bulbs

- 📺 Television
- 🌀 Fan
- 💻 Computer
- 🔌 Appliance

Sources of Energy

Where do we get the ENERGY?

Sun

The Sun is a very important source of energy. It provides light and heat energy to Earth.

Examples: Plants use sunlight to grow, and solar panels use sunlight to produce electricity.

Wind

Wind is moving air. Wind has movement energy that can be used to produce electricity using wind turbines.

Example: A wind turbine uses moving wind to generate electricity.

Sources of Energy

Water

Moving or falling water can provide energy. Hydroelectric power stations use moving water to generate electricity.

Example: Water flowing through a dam can turn turbines to produce electricity.

Food

Food contains chemical energy. Our bodies use this energy to move, grow, think and stay warm.

Example: Eating breakfast gives you energy to learn and play.

ENERGY IS ALL AROUND US

We use different forms of energy every day.

Energy comes from different sources.

Energy can be transferred from one object to
another.

Thank You,
Earth!
